

# In 2022, industry clinical trials:

Generated **£7.4bn** for the UK economy and created **65,000 jobs**.

Benefitted the NHS by generating **£1.2bn** in direct revenue, with **13,000 jobs** directly supporting NHS services.

This is where we are today. With government support, the pharmaceutical industry can drive even better benefits for the UK, improving patient outcomes, creating high value jobs and strengthening the UK's global leadership in life sciences.

**Richard Torbett**, ABPI Chief Executive

*We share a common goal*

# The UK pharmaceutical industry contributes:

**£17.6bn**  
in direct economic value.

**126,000**  
highly skilled jobs across the UK.

The largest private sector investment in UK R&D, at **£9bn** in 2022.

# Improved patient outcomes:

Have been associated with Primary Care Networks **collaborating on better disease management**, such as high blood pressure.

Using four medicines at NICE-recommended levels could add **429,000 healthy life years** and **£17.9 billion in UK productivity**.

Are associated with vaccination, which remains **the most cost-effective public health intervention**, second only to clean water.

# Medicines and vaccines:

Could contribute to a 20% reduction in incidence of six major diseases and could raise GDP by **£26.3bn annually within 10 years**.

The ABPI's pharma impact map shows the significant contribution the industry makes to local and regional economies in all four UK nations:
